

Paediatric STAG inclusion /exclusion criteria

Royal Aberdeen Children's Hospital

Comparison of patients seen on the RACH trauma pathway between August 2019 – June 2022

Authors:

Nina Currie - Paediatric Trauma Coordinator

Ashley Allan - Clinical Psychologist

Gillian Winter - Speciality Doctor /

Paediatric MTC Lead

STAG inclusion criteria:

- Injury sustained in past 7/7
- Length of Stay > 3/7 OR admission to ITU/HDU/SIU
- Injuries included (exclusion criteria on STAG website)

RACH trauma pathway inclusion criteria (any 2 +):

- Traumatic Mechanism of Injury
- Polytrauma
- Emotional Distress (patient &/or family)
- Rehab needs

Key findings:

89

patients in total

Motor vehicles and falls most common MOI in both groups

Femur fractures account for 58% of total patients

26 additional patients had standalone MTC Psychology contact

25% on RACH trauma pathway non STAG recordable

The RACH major trauma pathway ensures a wider patient group benefits from enhanced care based on clinical need rather than injury severity scoring
